

Emissions of carbon dioxide (CO₂) and hydrogen sulphide (H₂S) from Hellisheidi and Nesjavellir 2003-2017

At this point, the margin of error is assumed to be around 5%.

Commentary 2017:

1) CO₂ and H₂S dissolved and reinjected in condensate water subtracted. First done in 2015.

2) Approx. 12.000 tons of CO₂ and 6.000 tons of H₂S were reinjected in the SulFix and CarbFix projects.
